C source + dependencies + selected function
Fixed target semantics and observable bits / bytes
1 IMPLEMENTATION CHECKING
CBMC: traditional bounded model checking
Harness, assertions and unwinding bounds
2 MODEL GENERATION
CompCert Csyntax + original Csem / Cexec
Provenance, property mapping, pending goals
Properties / counterexamples
(not axioms)
Execution model +
unproved obligations
Bounded evidence
3 PROOF CONSTRUCTION IN ROCQ
Explicit preconditions and specifications
Correspondence + independent property reproof
Safety, termination and functional induction
Theorems and remaining obligations
SCOPED EVIDENCE AND COST REPORT
Bounded results | checked theorems | pending goals
Source hashes, assumptions, tokens, time and memory
